

# **Team Project CS20/21**

Meeting Minutes

March 10, 2021

## **Opening**

The meeting was called to order at 11:15 AM on March 10, 2021 on Microsoft Teams.

## **Present**

- Pragati Mishra
- David O'Neill
- Dominykas Meistas

## **Topic of the meeting**

This meeting's purpose was to figure out the problem why integration tests stopped working, as well as creating a plan to increase the test coverage for the application.

## **Discoveries**

### Integration tests not working problem

For this problem we have discovered that two different consoles windows were necessary to run integration tests: one for running the application on local host, and another to run the tests. We have also identified that clearing and repopulating database is essential before running the tests, otherwise some of them will fail. We also deleted some of the older tests that were sabotaging our testing process and were not useful anymore.

### Increasing the test coverage for the application

After running the tests using test coverage tool we had noticed that the test coverage was very low. We came up with an initial strategy on how to increase the coverage, however decided to discuss this more thoroughly with other team members so that maybe we can find a better solution.

## **Adjournment**

The meeting was adjourned at 12:15 PM.
