REPO: cs21-main	COMMIT: 7c7d0208

FEEDBACK

FUNCTIONAL FEEDBACK

Feedback One: operators_query_tool/operators/views.py - lines 128-165: I personally would suggest replacing this with an iterator of some kind, you could iterate over context.items() and have a single conditional statement instead of a condition for every attribute of the operator.

STYLE FEEDBACK

Feedback Two: operators_query_tool/operators/templates/query_operators.html: Small thing but I think you've used a different tabulation setting in this file, your other files use four spaces while this uses a tabulation.

GENERAL FEEDBACK

Feedback Three: operators_query_tool/operators/views.py - lines 52, 53: Why is this HTTP 500 error catch commented out? Feedback Four: Operators_query_tool/operators/views.py - lines 155-157: Why is the modes condition commented out? Please include files and lines for review next time!
